

Friendship Questionnaire (FQ) Scoring Note

There are two errors in the paper describing the Friendship Questionnaire (FQ).

1. The Abstract states that the FQ has a maximum score of 135. This is incorrect, the maximum score is 140. The scoring method for the Friendship Questionnaire is described on p510 of the paper (see http://docs.autismresearchcentre.com/papers/2003_BCandSW_FQ.pdf).
2. On p510, the paper states that the FQ comprises 35 questions, on which it is possible to score on 27 items. This is incorrect. It is possible to score on 28 items. Please see the Appendix for the precise scoring scheme for each item.
